**Mummy
(Parasite)**
Tan, bloated
body

Greenbug
Green with dark
stripe down back

**Bird Cherry-Oat
Aphid**
Olive-green with red
patch on back of body

To sample the wheat field, use a "zig zag" or "W" pattern and walk at least 15 steps (about 30 foot) between stops. Carefully pull and examine 3 tillers (stems) per stop, taking one tiller from the left, right, and front.

At each stop, mark the circle ● if you find a mummy on that infested tiller. Mark the box with an X ☒ if the tiller has one or more live greenbugs on it.

Keep a running total of tillers with mummies and infested tillers. After each set of 5 stops, look at the number of mummies and infested tillers and follow the decision rules in the columns.

Mummies Column:

If the number of tillers with mummies exceeds the number in the mummy column, Stop Sampling, and DO NOT TREAT.

If the number of tillers with mummies is less than the number in the mummy column, use the Infested Tillers columns to make a decision.

Infested Tillers Column:

If the number of infested tillers is less than or equal to the number in the Don't Treat Column, Stop Sampling, and DO NOT TREAT.

If the number of infested tillers is falls within the number range in the Keep Sampling Column, KEEP SAMPLING.

If the number of infested tillers is equal to or greater than the number in the Treat Column, Stop Sampling, and TREAT.

If the "Stop Sampling" box is reached and a decision is not made: Recheck the field in 2-6 days.
